

**AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application.

**Listing of Claims:**

1. (Currently Amend) A method for managing information between communicating objects situated in different locations, said information originating from information provider communicating objects and considered by communicating objects able to deliver information, said method comprising the steps:

acquiring ~~and storing~~ data comprising an item of information to be disseminated, by a user using a communication object situated in a first location, ~~an information provider communicating object~~ and comprising a parameter indicating said first identifying a location associated with said item of information, wherein said first location belongs the location ~~belonging~~ to a set of locations identified in a unique manner in a system of reference;

storing said data comprising an item of information and a parameter indicating said first location associated with said item of information in a service platform; and

delivering, from said remote service platform, at least one stored item of information associated with said first location, to a user by way of at least one communicating object able to deliver information and situated at a second location belonging to said set of locations ~~location~~.

2. (Currently Amended) The method as claimed in claim 1, wherein said communicating according to which said communicating object able to deliver information comprises an information delivery device fixed at second said location, said information delivery device a location and affording access to stored information associated with said first location.

3. (Currently Amended) The method as claimed in ~~any one of the preceding claims~~claim 1, ~~wherein according to which~~ a stored item of information associated with a location is delivered by way of a communicating object able to deliver information and providing the parameter indicating the identification of said location.

4. (Currently Amended) The method as claimed in claim 1~~any one of the preceding claims~~, comprising the steps of:

~~determining according to which~~ a location in which a communicating object able to deliver information is situated ~~is determined~~, and

delivering stored information associated with another location by way of said ~~location is delivered by way of said~~ communicating object.

5. (Currently Amended) The method as claimed in ~~any one of the preceding claims~~claim 1, further comprising the steps of:

~~according to which~~ determining a location in which an object providing information is situated ~~is determined~~, and

acquiring and storing at least one datum comprising an item of information provided by way of said object providing information and a parameter indicating the identification of said location ~~are acquired and are stored~~.

6. (Currently Amended) The method as claimed in ~~any one of the preceding claims~~ claim 1, further comprising the steps of: according to which

carrying out a step of identification of a user of a communicating object able to deliver information ~~is carried out~~, and ~~the user is afforded~~

affording access of the user to stored information associated with a location by way of said communicating object as a function of at least the results of this step of identification.

7. (Currently Amended) The method as claimed in claim 6, ~~according to which wherein~~ furthermore further comprising a step of authentication of the user ~~is carried out, and, wherein~~ access to associated stored information is a function of at least the results of this step of authentication.

8. (Currently Amended) The method as claimed in ~~any one of the preceding claims~~ claim 1, ~~according to which wherein~~ said information provider communicating object associated with a location comprises an information acquisition device fixed to said location.

9. (Currently Amended) The method as claimed in ~~any one of the preceding claims~~ claim 1, comprising the step of:

~~according to which~~ carrying out at least one step of identification of a user of an information provider communicating object ~~is carried out, and~~

acquiring and storing at least one datum comprising an item of information provided by the user by way of said object ~~is acquired and stored~~ as a function of at least the results of this step of identification.

10. (Currently Amended) The method as claimed in claim 9, ~~according to which wherein~~ furthermore further comprising a step of authentication of the user ~~is carried out, and, wherein~~ the acquisition and the storage of the datum is a function of at least the results of this step of authentication.

11. (Currently Amended) The method as claimed in ~~any one of the preceding claims~~claim 1, ~~comprising the step of triggering according to which~~, when a communicating object is located for the first time in a location, an operation destined for said communicating object ~~is triggered~~, prompting it to provide an item of information when the communicating object is an information provider, and to have access to stored information associated with said location when the communicating object is able to deliver information.

12. (Currently Amended) A system for managing information between communicating objects ~~situated in different locations by way of a location~~, said information originating from information provider communicating objects and ~~considered by having to be consulted from~~ communicating objects able to deliver information, said system comprising:

~~means for implementing a method as claimed in any one of the preceding claims~~for acquiring data comprising an item of information to be disseminated, provided by a user via a communicating object situated in a first location, and comprising a parameter identifying said first location associated with said item of information, wherein said first location belongs to a set of locations identified in a unique manner in a system of reference;

means for storing said data comprising an item of information and a parameter indicating said first location associated with said item of information in a service platform; and

means for delivering, from said remote service platform, at least one stored item of information associated with said first location to a user by way of at least one communicating object able to deliver information and situated at a second location belonging to said set of locations.

13. (Currently Amended) A platform for managing information comprising at least two information management systems ~~according to claim 12~~, each information management system comprising:

means for acquiring and storing data comprising an item of information to be disseminated, provided by a user via a communicating object situated in a first location and comprising a parameter indicating an identification of said first location associated with said item of information, said first locating belonging to a set of locations identified in a unique manner in a system of reference;

means for delivering at least one stored item of information associated with said first location to a user by way of at least one communicating object able to deliver information and situated in a second location belonging to said set of locations,

wherein the platform comprises~~comprising~~ means specifically for matching up the location identification in the system of reference of one of the two information management systems with the location identification in the system of reference of the other of the two information management systems.
